| Konjugation              | Unconjugated                                                                                                                                                                                                                                                                                                                                       |
| Puffer                   | 0.01M Sodium Phosphate, 0.25M NaCl, pH 7.6                                                                                                                                                                                                                                                                                                         |
| Reinheit                 | Based on immunoelectrophoresis at an antigen concentration of 20 mg/ml, the pattern of precipitation against goat anti-mouse whole serum is the same as that against goat anti-mouse IgG, Fc fragment specific. No precipitin line was detected against goat anti-mouse IgA, $\alpha$ chain specific or goat anti-mouse IgM, $\mu$ chain specific. |
