| Alternativnummer         | ABT-BP6542B-500UG                                                                                                                                                                                                                                             |
| Hersteller               | Abcepta                                                                                                                                                                                                                                                       |
| Kategorie                | Proteine/Peptide                                                                                                                                                                                                                                              |
| Produktbeschreibung      | DNAJC19 is a probable component of the PAM complex, a complex required for the translocation of transit peptide-containing proteins from the inner membrane into the mitochondrial matrix in an ATP-dependent manner. The protein may act as a co-chaperon... |
| NCBI                     | <a href="#">131118</a>                                                                                                                                                                                                                                        |
| UniProt                  | <a href="#">Q96DA6</a>                                                                                                                                                                                                                                        |
| Formulierung             | Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.                                                                                                                          |
| Target-Kategorie         | The synthetic peptide sequence used to generate the antibody AP6542b was selected from the C-term region of human DNAJC19. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.           |
