| Hersteller               | Abcepta                                                                                                                                                                                                                                                |
| Kategorie                | Proteine/Peptide                                                                                                                                                                                                                                       |
| Produktbeschreibung      | Calponin-3 is a protein with a markedly acidic C terminus, the basic N-terminus is highly homologous to the N-terminus of a related gene, CNN1. This protein is associated with the cytoskeleton but is not involved in contraction....                |
| NCBI                     | <a href="#">1266</a>                                                                                                                                                                                                                                   |
| UniProt                  | <a href="#">Q15417</a>                                                                                                                                                                                                                                 |
| Formulierung             | Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.                                                                                                                   |
| Target-Kategorie         | The synthetic peptide sequence used to generate the antibody AP6581c was selected from the Center region of human Calponin-3. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay. |
