Anwendungsbeschreibung	<p>ELISA:Sandwich:To detect Human IL-17D by sandwich ELISA (using 100 <math>\mu</math>L/well antibody solution) a concentration of 0.25 - 1.0 <math>\mu</math>g/mL of this antibody is required. This biotinylated polyclonal antibody, in conjunction with ProScis Polyclonal Anti-Human IL-17D (38-266) as a capture antibody, allows the detection of at least 0.2 - 0.4 ng/well of recombinant Human IL-17D.</p> <p>Western Blot:To detect Human IL-17D by Western Blot analysis this antibody can be used at a concentration of 0.1 - 0.2 <math>\mu</math>g/mL. Used in conjunction with compatible secondary reagents the detection limit for recombinant Human IL-17D is 1.5 - 3.0 ng/lane, under either reducing or non-reducing conditions.</p>
