Anwendungsbeschreibung	Peptide ELISA: antibody detection limit dilution 1:8000. Western Blot: Preliminary experiments gave an approx 90kDa band in Rat Duodenum and Testis lysates after 1ug/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 41.5kDa according to Rat XP_575429.2. The 90kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?
