Anwendungsbeschreibung	<p>Peptide ELISA: antibody detection limit dilution 1:2000. Western Blot: No specific signals and low background in Human Colon, Duodenum, Ileum and Lung lysates - our routinely used western blotting protocol does not allow detection of proteins as small as the ligand derived from its precursor or the precursor itself with a calculated size of 10.7kDa according to NP_002977.1. Therefore we cannot recommend an optimal concentration and the product is investigative grade. We would appreciate any feedback from people in the field - have any assay results been reported with other antibodies?</p>
