Anwendungsbeschreibung	<p>Peptide ELISA: antibody detection limit dilution 1:4000. Western Blot: Preliminary experiments gave an approx 27kDa band in Human Bone Marrow, Liver, and Brain (cerebellum) lysates after 1ug/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 47.3kDa according to NP_057288.1. The 27kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?</p>
