| Immunogen                | A chemically linked phosphoserine.                                                                                                                                                                                                                            |
| Produktbeschreibung      | Protein phosphorylation is involved in cell signaling pathways. These cascades are mediated by two types of kinases: serine/threonine kinases which phosphorylate serine and threonine amino acid side chains and tyrosine kinases which phosphorylate tyr... |
| Klonalität               | Monoclonal                                                                                                                                                                                                                                                    |
| Konzentration            | 100ug/200ul                                                                                                                                                                                                                                                   |
| Klon-Bezeichnung         | [2A4]                                                                                                                                                                                                                                                         |
| Isotyp                   | IgG1                                                                                                                                                                                                                                                          |

|              |                                                                                                                            |
