| Produktbeschreibung      | Biotin alkyne for the preparation of various biotinylated conjugates via Click Chemistry. This alkyne reacts with various azides, including biomolecules containing azide groups. Biotinylated conjugates can be used for various assays and applications ... |
| Molekulargewicht         | 281.37 kDa                                                                                                                                                                                                                                                    |
| Reinheit                 | 95% (by <sup>1</sup> H NMR, TLC, and functional testing).                                                                                                                                                                                                     |
| Formulierung             | Colorless solid.                                                                                                                                                                                                                                              |
| CAS Nummer               | [773888-45-2]                                                                                                                                                                                                                                                 |
