| Hersteller               | Antibodies.com                                                                                                                                                                                                                                                |
| Kategorie                | Biochemikalien                                                                                                                                                                                                                                                |
| Produktbeschreibung      | Thiol mono-reactive Cyanine 3 dye. This reagent can be used to attach Cyanine 3 fluorophore (an analog of Cy3) to proteins and peptides containing cysteine residues, as well as to other thiolated molecules (such as thiol-containing oligonucleotides).... |
| Molekulargewicht         | 666.56 kDa                                                                                                                                                                                                                                                    |
| Reinheit                 | 95% (by <sup>1</sup> H NMR and HPLC-MS).                                                                                                                                                                                                                      |
| Formulierung             | Red powder.                                                                                                                                                                                                                                                   |
| Formel                   | C <sub>36</sub> H <sub>43</sub> N <sub>4</sub> O <sub>3</sub> BF <sub>4</sub>                                                                                                                                                                                 |
