| Kategorie                | Biochemikalien                                                                                                                                                                                                                                                |
| Produktbeschreibung      | Fluorescein (FAM) amine, isomerically pure dye (5-isomer). Unlike fluoresceinamine, this reagent contains a linker arm with an aliphatic amine group that is more reactive. It can react with electrophilic reagents like activated esters or epoxides, an... |
| Molekulargewicht         | 510.97 kDa                                                                                                                                                                                                                                                    |
| Reinheit                 | 95% (by <sup>1</sup> H NMR and HPLC-MS).                                                                                                                                                                                                                      |
| Formulierung             | Yellow solid.                                                                                                                                                                                                                                                 |
