| Alternativnummer         | ASC-A21080-100,ASC-A21080-500                                                                       |
| Hersteller               | Abbkine Scientific                                                                                  |
| Wirt                     | Goat                                                                                                |
| Kategorie                | Antikörper                                                                                          |
| Applikation              | ELISA, IHC-P, WB                                                                                    |
| Spezies Reaktivität      | Gallus                                                                                              |
| Immunogen                | Chick IgY/IgG whole molecule                                                                        |
| Konjugation              | HRP                                                                                                 |
| Produktbeschreibung      | HRP conjugated Goat Anti-Chicken IgG (H+L) secondary antibody...                                    |
| Klonalität               | Polyclonal                                                                                          |
| Tag                      | Goat Anti-Chicken IgG                                                                               |
| Puffer                   | Liquid in PBS, pH 7.4, containing 1% BSA as stablizer and 50% Glycerol.                             |
| Reinheit                 | Affinity purified using solid phase Chicken IgG/Y (H&L) with finally > 95% purity based on SDS-PAGE |
| Formulierung             | Liquid solution                                                                                     |

|                        |                                                                                                                                                                                                       |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Anwendungsbeschreibung | Optimal working dilutions should be determined experimentally by the investigator. Suggested starting dilutions are as follows: WB (1:10000-1:100000), IHC-P (1:500-1:2000), ELISA (1:5000-1:100000). |
