| Hersteller               | Abbkine Scientific                                                                                          |
| Wirt                     | Goat                                                                                                        |
| Kategorie                | Antikörper                                                                                                  |
| Applikation              | ELISA, IHC-P, WB                                                                                            |
| Spezies Reaktivität      | Mouse                                                                                                       |
| Immunogen                | Mouse IgG whole molecule                                                                                    |
| Konjugation              | AP                                                                                                          |
| Produktbeschreibung      | AP conjugated Goat Anti-Mouse IgG (H+L) secondary antibody...                                               |
| Klonalität               | Polyclonal                                                                                                  |
| Tag                      | Goat Anti-Mouse IgG                                                                                         |
| Puffer                   | Liquid in PBS, pH 7.4, containing 0.02% Sodium Azide as preservative, 1% BSA as stablizer and 50% Glycerol. |
| Reinheit                 | Affinity purified using solid phase Mouse IgG (H&L) with finally > 95% purity based on SDS-PAGE             |
| Formulierung             | Liquid solution                                                                                             |

|                        |                                                                                                                                                                                                    |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Anwendungsbeschreibung | Optimal working dilutions should be determined experimentally by the investigator. Suggested starting dilutions are as follows: WB (1:1000-1:10000), IHC-P (1:500-1:1000), ELISA (1:1000-1:10000). |
