| Produktbeschreibung      | IFN-gamma is a cytokine. IFN-gamma can exert anticancer effects by activating p53 and p21, leading to cell cycle arrest, and/or by activating IRF-1 and Caspase-1, leading to pyroptosis, and by activating IRF-1, Caspase-8, cytochrome c release from mi... |
| Molekulargewicht         | Approximately 20-24 kDa & 16-17 kDa, based on SDS-PAGE under reducing conditions, due to the glycosylation.                                                                                                                                                   |
| Reinheit                 | 98                                                                                                                                                                                                                                                            |
| Formel                   | 3458(Gene_ID)P01579 (Q24-Q166)(Accession)                                                                                                                                                                                                                     |
| Anwendungsbeschreibung   | MCE Product type: Recombinant Proteins                                                                                                                                                                                                                        |
