| Produktbeschreibung      | Coronaviruses are enveloped viruses with a positive-sense RNA genome and with a nucleocapsid of helical symmetry. Coronavirus nucleoproteins localize to the cytoplasm and the nucleolus, a subnuclear structure, in both virus-infected primary cells and... |
| Klonalität               | Monoclonal                                                                                                                                                                                                                                                    |
| Konzentration            | 1mg/ml                                                                                                                                                                                                                                                        |
| Klon-Bezeichnung         | [1B12]                                                                                                                                                                                                                                                        |
