| Kategorie                | Biochemikalien                                                                                                                                                                                                                                                |
| Produktbeschreibung      | The spike protein (S) of coronavirus (CoV) attaches the virus to its cellular receptor, angiotensin-converting enzyme 2 (ACE2). A defined receptor-binding domain (RBD) on S mediates this interaction.The S protein plays key parts in the induction of n... |
| Molekulargewicht         | 51.7 kDa (predicted). Due to glycosylation, the protein migrates to 60-62 kDa based on Tris-Bis PAGE result.                                                                                                                                                  |
