Product Datasheet

Talabostat mesylate, CAS [[150080-09-4]] FBM-10-4005

Artikelname	Talabostat mesylate, CAS [[150080-09-4]]
Artikelnummer	FBM-10-4005
Hersteller Artikelnummer	10-4005
Alternativnummer	FBM-10-4005-5MG, FBM-10-4005-25MG
Hersteller	Focus Biomolecules
Kategorie	Biochemikalien
Produktbeschreibung	S9 family serine protease inhibitor...
Molekulargewicht	310.18
Reinheit	97% by HPLC, NMR (conforms)
Formulierung	White solid
CAS Nummer	[150080-09-4]
Formel	C ₉ H ₁₉ BN ₂ O ₃ CH ₃ SO ₃ H

Anwendungsbeschreibung	Talabostat mesylate is a non-selective inhibitor of the S9 family of serine proteases (IC50s: DPPIV = <4nM, DPP8 = 4nM, DPP9 = 11nM, QPP = 310nM, FAP = 560nM, PEP = 390nM).¹ Toxicity caused by DPP8/9 inhibition observed with non-selective DPPIV inhibitors limits their use as a diabetes treatment. However, Talabostat displays potent antitumor effects dependent on an intact host immune response.² It mediates tumor regression by accelerating the expansion of tumor-specific T cells.³ Additionally, DPP8/9 inhibition by Talabostat activates the proprotein form of Caspase-1 leading to a proinflammatory form of cell death in monocytes and macrophages - pyroptosis.⁴ Pyroptosis induction by DPP8/9 inhibition has been shown to be caused by activation of the inflammasome sensor protein NLRP1B.⁵
