| Immunogen                | Zika virus strains MR-766.                                                                                                                                                                                                                                    |
| Produktbeschreibung      | Genome polyprotein (UniProt: Q32ZE1) from Zika virus strain Mr 766 is a large molecular weight protein. In Zika virus surface proteins are arranged in an icosahedral-like symmetry. Attachment of the viral envelope protein E to host receptors mediates... |
| Klonalität               | Monoclonal                                                                                                                                                                                                                                                    |
| Klon-Bezeichnung         | [ZV-13]                                                                                                                                                                                                                                                       |
| Reinheit                 | Purified by Protein G affinity chromatography.                                                                                                                                                                                                                |
| Formulierung             | Supplied as a liquid in 0.1M Tris-Glycine, pH 7.4, 150mM sodium chloride, 0.05% sodium azide.                                                                                                                                                                 |
