| Kategorie                | Molekularbiologie                                                                                                                                                                                                                                             |
| Applikation              | WB                                                                                                                                                                                                                                                            |
| Produktbeschreibung      | PFKM is regulatory glycolytic enzymes that convert fructose 6-phosphate and ATP into fructose 1,6-bisphosphate (through PFK-1), fructose 2,6-bisphosphate (through PFK-2) and ADP. Three phosphofructokinase isozymes exist in humans: muscle, liver and p... |
