| Kategorie                | Antikörper                                                                                                                                                                                                                                                  |
| Applikation              | WB                                                                                                                                                                                                                                                          |
| Immunogen                | Synthetic peptide corresponding to the middle region of human JUN                                                                                                                                                                                           |
| Produktbeschreibung      | JUN gene is the putative transforming gene of avian sarcoma virus 17. JUN is highly similar to the viral protein, and interacts directly with specific target DNA sequences to regulate gene expression. JUN gene is intronless and is mapped to 1p32-p3... |
