| Kategorie                | Antikörper                                                                                                                                                                                                                                                    |
| Applikation              | WB                                                                                                                                                                                                                                                            |
| Immunogen                | Synthetic peptide corresponding to the N-terminal region of human UGT1A9                                                                                                                                                                                      |
| Produktbeschreibung      | UGT1A9 is a UDP-glucuronosyltransferase, an enzyme of the glucuronidation pathway that transforms small lipophilic molecules, such as steroids, bilirubin, hormones, and drugs, into water-soluble, excretable metabolites. UGT1A9 is active on phenols.Th... |
