| Produktbeschreibung      | The protein encoded by this gene plays a crucial role in Bcell development. Mutations in this gene cause Xlinked agammaglobulinemia type 1, which is an immunodeficiency characterized by the failure to produce mature B lymphocytes, and associated with... |
| Molekulargewicht         | 78.2 kDa                                                                                                                                                                                                                                                      |
| Tag                      | C-10*His                                                                                                                                                                                                                                                      |
