| Produktbeschreibung      | Derived from proteolytic degradation of complement C5, C5 anaphylatoxin is a mediator of local inflammatory process. C5 precursor is first processed by the removal of 4 basic residues, forming two chains, beta and alpha, linked by a disulfide bond. C... |
| Molekulargewicht         | 73.5 kDa (beta chain) & 114.6 kDa (alpha chain)                                                                                                                                                                                                               |
| Tag                      | C-10*His                                                                                                                                                                                                                                                      |
