Anwendungsbeschreibung	DMB is a small molecule glucagon-like peptide 1 (GLP-1) ago-allosteric modulator and agonist ($EC_{50} = 101 \text{ nM}$).¹ It significantly stimulated insulin secretion in BRIN-BD11 cells and decreased overall glucose excursion in mice.² DMB is a direct and selective gasdermin D (GSDMD) agonist that activates GSDMD pore formation and pyroptosis without cleaving GSDMD ($EC_{50} = 700 \text{ nM}$).³ It induced pyroptosis in mouse cancer cell lines and induced tumor regression and enhanced antitumor immunity. DMB-treated tumor cells acted as a tumor vaccine in mice indicating that DMB can trigger immunogenic cell death that provides protective antitumor immunity.
