Anwendungsbeschreibung	GSK3326595 is a potent (IC50 = 6.2nM), selective (>4000-fold over 20 other methyltransferases), SAM uncompetitive, peptide competitive inhibitor of PRMT5.1 PRMT5 inhibition activated the p53 pathway via induction of alternative splicing of MDM4 leading to a potent anti-proliferative response both in vitro and in vivo. Combination therapy with palbociclib (CDK4/6 inhibitor, Focus Cat. 10-4760) and GSK3326595 lead to increased efficacy of palbociclib in treating native and resistant models of melanoma via regulation of the PRMT5-MDM4 axis.2 Currently in clinical Trials.3
