| Produktbeschreibung      | PFKFB2 is involved in both the synthesis and degradation of fructose-2,6-bisphosphate, a regulatory molecule that controls glycolysis in eukaryotes. It has a 6-phosphofructo-2-kinase activity that catalyzes the synthesis of fructose-2,6-bisphosphate,... |
| Klonalität               | Polyclonal                                                                                                                                                                                                                                                    |
