| Kategorie                | Antikörper                                                                                                                                                                                                                                                    |
| Applikation              | IHC-P                                                                                                                                                                                                                                                         |
| Spezies Reaktivität      | Human                                                                                                                                                                                                                                                         |
| Immunogen                | A Co cell line established from a patient with Hodgkins disease of T-cell lineage (Ber-H2) and human recombinant protein (CD30/412) were used as the immunogen for the CD30 antibody cocktail.                                                                |
| Produktbeschreibung      | Recognizes a single chain glycoprotein of 105/120kDa, identified as CD30/Ki-1. CD30 is synthesized as a 90kDa precursor, which is processed in the Golgi complex into a membrane-bound phosphorylated mature 105/120kDa glycoprotein. In Hodgkins disease,... |
| Klonalität               | Monoclonal                                                                                                                                                                                                                                                    |
| Klon-Bezeichnung         | [Ber-H2 + CD30/412]                                                                                                                                                                                                                                           |
| UniProt                  | <a href="#">P28908</a>                                                                                                                                                                                                                                        |

|                        |                                                                                                                                                                                                                                                  |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reinheit               | Unpurified high titer supernatant                                                                                                                                                                                                                |
| Formulierung           | Bioreactor concentrate with 0.05% sodium azide                                                                                                                                                                                                   |
| Antibody Type          | Primary Antibody                                                                                                                                                                                                                                 |
| Application Verdünnung | Immunohistochemistry (FFPE): 1:100-1:200 for 30 min at RT (1)                                                                                                                                                                                    |
| Anwendungsbeschreibung | Optimal dilution of the CD30 antibody cocktail should be determined by the researcher.1. Staining of formalin-fixed tissues requires boiling tissue sections in 10mM Citrate buffer, pH 6.0, for 10-20 min followed by cooling at RT for 20 min. |
