| Produktbeschreibung      | Receptor for interleukin-33 (IL-33), signaling requires association of the coreceptor IL1RAP. Its stimulation recruits MYD88, IRAK1, IRAK4, and TRAF6, followed by phosphorylation of MAPK3/ERK1 and/or MAPK1/ERK2, MAPK14, and MAPK8. Possibly involved i... |
| Konzentration            | 200 ug/mL (prior to lyoph)                                                                                                                                                                                                                                    |
| Molekulargewicht         | 21kDa                                                                                                                                                                                                                                                         |
| Tag                      | N-terminal His Tag                                                                                                                                                                                                                                            |
