Anwendungsbeschreibung	<p>Assay Type: Sandwich. Assay length: 1.5h. Research Area: CD & Adhesion molecule, Tumor immunity, . Test principle: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Human EGFR, and the Human EGFR standard plate wells that pre-coated using protein-related techniques are provided separately. Standard/Sample Diluent Buffer or samples are added to the appropriate microtiter plate wells ,then added a HRP-conjugated antibody specific to Human EGFR. After TMB substrate solution is added, only those wells that contain Human EGFR and HRP-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm 10nm. The concentration of Human EGFR in the samples is then determined by comparing the OD of the samples to the standard curve</p>
