Product Datasheet

Human anti-HAV IgG(anti-Hepatitis A antibody IgG) ELISA Kit EBT-ELK0924

Artikelname	Human anti-HAV IgG(anti-Hepatitis A antibody IgG) ELISA Kit
Artikelnummer	EBT-ELK0924
Hersteller Artikelnummer	ELK0924
Alternativnummer	EBT-ELK0924-96, EBT-ELK0924-48, EBT-ELK0924-96X5
Hersteller	ELK Biotechnology
Kategorie	Kits/Assays
Spezies Reaktivität	Human
Konzentration	10 ng/mL
Detektionsbereich	0.16-10 ng/mL
Sensitivitaet	0.063 ng/mL
Proben	serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids

Anwendungsbeschreibung

Assay Type: Sandwich. Assay length: 3.5h. Research Area: Infection immunity,. Test principle: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Human anti-HAV. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Human anti-HAV. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Human anti-HAV, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm 10nm. The concentration of Human anti-HAV in the samples is then determined by comparing the OD of the samples to the standard curve
