## Product Datasheet

### Human FcγRI(Receptor I For The Fc Region Of Immunoglobulin G) Microsample ELISA Kit EBT-ELK2070MS

Artikelname	Human FcγRI(Receptor I For The Fc Region Of Immunoglobulin G) Microsample ELISA Kit
Artikelnummer	EBT-ELK2070MS
Hersteller Artikelnummer	ELK2070MS
Alternativnummer	EBT-ELK2070MS-96, EBT-ELK2070MS-48, EBT-ELK2070MS-96X5
Hersteller	ELK Biotechnology
Kategorie	Kits/Assays
Spezies Reaktivität	Human
Konzentration	5000 pg/mL
Detektionsbereich	78.13-5000 pg/mL
Sensitivitaet	32 pg/mL
UniProt	<a href="#">P12314</a>
Proben	serum, plasma, tissue homogenates and other biological fluids

Anwendungsbeschreibung	<p>Assay Type: Sandwich. Assay length: 3.5h. Research Area: CD &amp; Adhesion molecule, Infection immunity, . Test principle: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Human FcγRI. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Human FcγRI. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Human FcγRI, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Human FcγRI in the samples is then determined by comparing the OD of the samples to the standard curve</p>
