Product Datasheet

Recombinant Human VEGF-D (C-6His) EBT-EPT213

Artikelname	Recombinant Human VEGF-D (C-6His)
Artikelnummer	EBT-EPT213
Hersteller Artikelnummer	EPT213
Alternativnummer	EBT-EPT213-10
Hersteller	ELK Biotechnology
Kategorie	Proteine/Peptide
Produktbeschreibung	Recombinant Human Vascular Endothelial Growth Factor D is produced by our Mammalian expression system and the target gene encoding Phe93-Ser201 is expressed with a 6His tag at the C-terminus....
Molekulargewicht	Molecular weight: 13 KDa. Apparent molecular weight: 18 KDa, reducing conditions
UniProt	O43915
Reinheit	Greater than 95% as determined by reducing SDS-PAGE.

Anwendungsbeschreibung	<p>Redissolve: Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is not recommended to reconstitute to a concentration less than 100 µg/ml. Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles.. Endotoxin: Less than 0.1 ng/µg (1 EU/µg) as determined by LAL test. Biological activity: Immobilized Human VEGFR2-Fc(CatCJ92) at 5 µg/ml (100 µl/well) can bind Human VEGF-D-His(CatC498). The ED50 of Human VEGF-D-His(CatC498) is 0.214 µg/ml. Background: Vascular endothelial growth factor D (VEGF-D) is a member of the platelet-derived growth factor/vascular endothelial growth factor (PDGF/VEGF) family. It is highly expressed in lung, heart, small intestine and fetal lung, and at lower levels in skeletal muscle, colon, and pancreas. VEGF-D is growth factor active in angiogenesis, lymphangiogenesis and endothelial cell growth, stimulating their proliferation and migration and also has effects on the permeability of blood vessels. It may function in the formation of the venous and lymphatic vascular systems during embryogenesis, and also in the maintenance of differentiated lymphatic endothelium in adults. It undergoes a complex proteolytic maturation, generating multiple processed forms that bind and activate VEGFR-2 and VEGFR-3 receptors.</p>
