## Product Datasheet

### Recombinant Mouse Thrombomodulin (C-6His) EBT-EPT230

Artikelname	Recombinant Mouse Thrombomodulin (C-6His)
Artikelnummer	EBT-EPT230
Hersteller Artikelnummer	EPT230
Alternativnummer	EBT-EPT230-10
Hersteller	ELK Biotechnology
Kategorie	Proteine/Peptide
Produktbeschreibung	Recombinant Mouse Thrombomodulin is produced by our Mammalian expression system and the target gene encoding Leu17-Ser517 is expressed with a 6His tag at the C-terminus....
Molekulargewicht	Molecular weight: 54.6 KDa. Apparent molecular weight: 85-90 KDa, reducing conditions
UniProt	<a href="#">P15306</a>
Reinheit	Greater than 95% as determined by reducing SDS-PAGE.

Anwendungsbeschreibung

Endotoxin: Less than 0.1 ng/µg (1 EU/µg) as determined by LAL test.  
Background: Thrombomodulin is also known as CD141 antigen and blood dendritic cell antigen 3 (BDCA3), which is encoded by the THBD gene. The deduced amino acid sequence of mouse THBD predicts a signal peptide (aa 1 to 16) and a mature chain (aa 17 to 577) that consists of the following domains: C-type lectin, EGF-like, transmembrane and cytoplasmic. Mouse THBD is corresponding to the extracellular portion of the type I membrane protein. Predominantly synthesized by vascular endothelial cells, THBD inhibits coagulation and fibrinolysis. It functions as a cell surface receptor and an essential cofactor for active thrombin, which in turn activates protein C and thrombinactivatable fibrinolysis inhibitor (TAFI), also known as carboxypeptidase B2 (CPB2). In addition, THBD gene polymorphisms are associated with human disease and THBD plays a role in thrombosis, stroke, arteriosclerosis, and cancer
