| Produktbeschreibung      | Flagellin is the subunit protein which polymerizes to form the filaments of bacterial flagella. Source: Recombinant full length protein corresponding to aa1-493 of Uncultured Bacterium Flagellin_D0/D1, expressed in E. coli. Molecular Weight: ~51.8kD ... |
| Molekulargewicht         | 51.8                                                                                                                                                                                                                                                          |
| UniProt                  | <a href="#">Q6QA53</a>                                                                                                                                                                                                                                        |
| Reinheit                 | 85% (SDS-PAGE)                                                                                                                                                                                                                                                |
| Formulierung             | Supplied as a lyophilized powder from 20mM Tris-HCl, 0.5M sodium chloride, pH 8.0, 6% trehalose. Reconstitute with sterile ddH2O to a concentration of 0.1-1mg/ml.                                                                                            |
