Tag	Acetylcholinesterase (AChE)
Anwendungsbeschreibung	CheKine(TM) Micro Acetylcholinesterase (AChE) Activity Assay Kit provides a convenient tool for detection of Acetylcholinesterase (AChE) Activity. The mechanism is as follows: AChE catalyzes the hydrolysis of Ach to generate choline, which reacts with DTNB to generate 5-sulphydryl nitrobenzoic acid (TNB). TNB had absorption peak at 412 nm, and the activity of AChE was calculated by measuring the increase rate of absorbance at 412 nm.
