Anwendungsbeschreibung

Rat Amylin ELISA Kit employs a two-site sandwich ELISA to quantitate Amylin in samples. An antibody specific for Amylin has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any Amylin present is bound by the immobilized antibody. After removing any unbound substances, HRP-Conjugate Rat Amylin detection antibody is added to the wells. Following a wash to remove any unbound HRP reagent, a Chromogen solution is added to the wells and color develops in proportion to the amount of Amylin bound in the initial step. The color development is stopped and the intensity of the color is measured.
