Anwendungsbeschreibung

This Human Tumor necrosis factor receptor superfamily member 13B (TNFRSF13B) ELISA Kit employs a two-site sandwich ELISA to quantitate TNFRSF13B in samples. An antibody specific for TNFRSF13B has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any TNFRSF13B present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for TNFRSF13B is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of TNFRSF13B bound in the initial step. The color development is stopped and the intensity of the color is measured.
