Anwendungsbeschreibung

Human Synaptogyrin-3 (SYNGR3) ELISA Kit employs a two-site sandwich ELISA to quantitate Synaptogyrin-3 in samples. An antibody specific for Synaptogyrin-3 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any Synaptogyrin-3 present is bound by the immobilized antibody. After removing any unbound substances, HRP-Conjugate Human Synaptogyrin-3 detection antibody is added to the wells. Following a wash to remove any unbound HRP reagent, a Chromogen solution is added to the wells and color develops in proportion to the amount of Synaptogyrin-3 bound in the initial step. The color development is stopped and the intensity of the color is measured.
