Anwendungsbeschreibung

This Human Taste receptor type 2 member 38 (TAS2R38) ELISA Kit employs a two-site sandwich ELISA to quantitate TAS2R38 in samples. An antibody specific for TAS2R38 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any TAS2R38 present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for TAS2R38 is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of TAS2R38 bound in the initial step. The color development is stopped and the intensity of the color is measured.
