Anwendungsbeschreibung

Human Solute carrier family 40 member 1 (SLC40A1) ELISA Kit employs a two-site sandwich ELISA to quantitate SLC40A1 in samples. An antibody specific for SLC40A1 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any SLC40A1 present is bound by the immobilized antibody. After removing any unbound substances, HRP-Conjugate Human SLC40A1 detection antibody is added to the wells. Following a wash to remove any unbound HRP reagent, a Chromogen solution is added to the wells and color develops in proportion to the amount of SLC40A1 bound in the initial step. The color development is stopped and the intensity of the color is measured.
