Anwendungsbeschreibung

Human Secretogranin-2 (SCG2) ELISA Kit employs a two-site sandwich ELISA to quantitate SCG2 in samples. An antibody specific for SCG2 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any SCG2 present is bound by the immobilized antibody. After removing any unbound substances, HRP-Conjugate Human SCG2 detection antibody is added to the wells. Following a wash to remove any unbound HRP reagent, a Chromogen solution is added to the wells and color develops in proportion to the amount of SCG2 bound in the initial step. The color development is stopped and the intensity of the color is measured.
