Anwendungsbeschreibung

This Human 6-keto-prostaglandin F1a (6-K-PGF1a) ELISA Kit employs a two-site sandwich ELISA to quantitate 6ketoPGF1a in samples. An antibody specific for 6ketoPGF1a has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any 6ketoPGF1a present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for 6ketoPGF1a is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of 6ketoPGF1a bound in the initial step. The color development is stopped and the intensity of the color is measured.
