Anwendungsbeschreibung

This Human Adrenergic alpha-1A receptor (ADRA1A) ELISA Kit employs a two-site sandwich ELISA to quantitate ADRA1A in samples. An antibody specific for ADRA1A has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any ADRA1A present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for ADRA1A is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of ADRA1A bound in the initial step. The color development is stopped and the intensity of the color is measured.
