Anwendungsbeschreibung

This Human Receptor-type tyrosine-protein phosphatase gamma (PTPRG) ELISA Kit employs a two-site sandwich ELISA to quantitate PTPRG in samples. An antibody specific for PTPRG has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any PTPRG present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for PTPRG is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of PTPRG bound in the initial step. The color development is stopped and the intensity of the color is measured.
