Anwendungsbeschreibung

This Human Tyrosine-protein phosphatase non-receptor type 22 (PTPN22) ELISA Kit employs a two-site sandwich ELISA to quantitate PTPN22 in samples. An antibody specific for PTPN22 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any PTPN22 present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for PTPN22 is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of PTPN22 bound in the initial step. The color development is stopped and the intensity of the color is measured.
