Anwendungsbeschreibung

This Human CAMP-dependent protein kinase type II-beta regulatory subunit (PRKAR2B) ELISA Kit employs a two-site sandwich ELISA to quantitate PRKAR2B in samples. An antibody specific for PRKAR2B has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any PRKAR2B present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for PRKAR2B is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of PRKAR2B bound in the initial step. The color development is stopped and the intensity of the color is measured.
