Anwendungsbeschreibung

This Human Putative metallothionein MT1DP (MT1DP) ELISA Kit employs a two-site sandwich ELISA to quantitate MT1DP in samples. An antibody specific for MT1DP has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any MT1DP present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for MT1DP is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of MT1DP bound in the initial step. The color development is stopped and the intensity of the color is measured.
