Anwendungsbeschreibung

This Human Vascular endothelial cell growth factor receptor 2 (VEGFR-2/FIk-1) ELISA Kit employs a two-site sandwich ELISA to quantitate KDR in samples. An antibody specific for KDR has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and anyKDR present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for KDR is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of KDR bound in the initial step. The color development is stopped and the intensity of the color is measured.
