Proben	Cell culture supernatantsSerumPlasmaOther biological fluids

Anwendungsbeschreibung

This Human Clusterin (CLU) ELISA Kit employs a two-site sandwich ELISA to quantitate CLU in samples. An antibody specific for CLU has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any CLU present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for CLU is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of CLU bound in the initial step. The color development is stopped and the intensity of the color is measured.
