Anwendungsbeschreibung

This Human Colon cancer-specific antigen-2 (CCSA-2) ELISA Kit employs a two-site sandwich ELISA to quantitate CCSA-2 in samples. An antibody specific for CCSA-2 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any CCSA-2 present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for CCSA-2 is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of CCSA-2 bound in the initial step. The color development is stopped and the intensity of the color is measured.
